In 2019, before the pandemic hit, 140 million Americans were living in poverty or just one emergency away from economic ruin: 60% of Black people (24 million), 64% of Hispanic/Latino people (38 million), 40% of Asian people (8 million), 60% of Indigenous and Native people (2 million) and 33% of white people (66 million). These tens of millions of people live in every region, state and county in the country. Poverty was the fourth leading cause of death, claiming more lives than homicide, gun violence, diabetes or obesity. Long-term poverty was responsible for 295,000 deaths a year - or over 800 deaths a day.

The pandemic festered in these fissures, taking root in systemic racism, poverty, the denial of health care, ecological devastation, wealth inequality and rampant military spending. During the first two years, governments at all levels responded to the crisis by expanding access to health care, housing, water, food and utilities. These overdue changes proved that in the world’s richest country, we can ensure a dignified life for all. But these pandemic programs were temporary. When they ended abruptly, poverty and related interlocking injustices began to rise once again.

While millions of people remain without work, living wages, housing, clean water, food or health care, corporations and the wealthy are doing exceedingly well. Between 2020-2022, billionaire wealth grew by $1.5 trillion - more than $2 billion a day.

Religious and moral texts are clear that making policy that does not protect the rights of the poor and puts the cause of the wealthy first is evil and wrong. Isaiah 10 says, “Woe to those who legislate evil, who make unjust laws to deprive the poor of their rights and withhold justice from the oppressed.” Jeremiah 22 reminds us, “Thus says the Lord: Do justice and righteousness, and deliver from the hand of the oppressor those who have been robbed. And do no wrong or violence to the immigrant, the orphan, and the widow, nor shed innocent blood in this place.” Matthew 25 tells us, “Truly, I say to you, as you did not do it to one of the least of these, you did not do it to me.” Indeed, the first governing principle of the US Constitution is to establish justice.

If we do not want to enable this wrongdoing, we must speak out and stand up against it. This is why the Poor People’s Campaign: A National Call for Moral Revival is organizing across the nation: to reveal these injustices, change the narrative, and build our power.

**Fight Poverty, not the Poor!**

*The PPC:NCMR created this fact sheet using the most comprehensive and current publicly available data through May 2023. Where possible, data is disaggregated to reflect the complex reality of the interrelated injustices contained in this document. Unfortunately, there are significant gaps in racial, ethnic and other demographic data, reflecting gaps in data collection and statistical methodologies, which the PPC:NCMR cannot control. We continue to push for improvements to fill these gaps.*

## IN HAWAII:

### Poverty and Low-Wages:

Poverty is a policy choice, reflecting both low wages and high costs of living. These two conditions make it hard to meet basic needs and easy to fall into debt. In Hawaii:

- Between 2018-2020, there were 605,000 poor and low-income people, accounting for 43.8% of the population.**
- To meet their basic needs, a household with two adults and two children needs to earn over $29/hour. However, the current minimum wage is just $10.10/hour. At this wage, an individual must work 161 hours/week to afford a modest two-bedroom apartment.
- There are 176,462 people, or 27.3% of the workforce, earning less than $15/hour. This includes 158,754 adults and 26.1% of Asian and Native workers, 36.7% of Black workers, 36.2% of Hispanic workers, 25.7% of white workers, 34.5% of working women and 34.9% of working women of color.
- Average household debt rose 7% in 2022 to an average of $82,650.
- Average student loan debt held by households was $3,910 at the end of 2022.

### Militarism:

Between 2001-2020, $106.11 million to nuclear weapons. In 2023, $309.6 million to Pentagon spending, $88.04 million to immigration enforcement and $1.50-$1.80 in economic activity. Enacting Medicare for All would save $450 billion in health care costs and 68,000 lives every year. Ending mass incarceration could raise average US life expectancy by five years. Providing permanent safe housing delivers lifelong benefits to children and families at an average cost of $12,800 per person per year, far less than the cost of crisis services for those suffering chronic homelessness. Paid Family and Medical Leave improves employment, especially among women, increases child well-being and protects against poverty when health challenges arise.

### Health Care and the Pandemic:

Across the country, approximately 1,000 people are still dying from Covid every week and millions of people lack access to health care. In Hawaii:

- Approximately 508,000 workers, or 75% of the workforce in the state, do not have access to paid leave.
- Between 2019 and 2020, Hawaii experienced more than a two-month decline in average life expectancy.

### Climate Crisis and Ecological Devastation:

Extreme heat, storms and drought are becoming more common, with poor and low-income communities at greatest risk. In Hawaii:

- Over the past century, the state warmed 1.1 degrees Celsius. As this trend continues, food production, spread of diseases, and health will all be adversely impacted.
- Precipitation patterns have also changed, with increased risks of flooding, drought and water scarcity.
- The percentage of poor and low-income household income that goes towards energy costs is 5 times greater than what an average income household spends on energy.

### Freedom from Debt:

There is an abundance of wealth and resources to meet our basic needs and ensure we all survive and thrive.

- A proposed federal tax on the annual increase in billionaires’ wealth would generate an estimated $557 billion over 10 years. Hawaii has one of the most lucrative tourism industries in the country, with more than 10 million visitors per year.

### Democracy:

Across the nation, a surge of attacks on voting rights and on the rights of women and LGBTQ+ people are denying basic rights to millions of people and constraining our ability to participate in democracy. Poor and low-income people can change this direction. In Hawaii:

- There were 3 voter restrictive bills introduced between 2020 and 2023, and 6 anti-LGBTQ+ laws introduced in 2023. None of these were enacted.

In Hawaii, there are 198,986 poor and low-income eligible voters, including 71,766 white voters, 6,845 Latino voters, 97,348 Asian voters, 883 Black voters and 41 Indigenous voters. Together, they account for 18% of the electorate.

There is an abundance of wealth and resources to meet our basic needs and ensure we all survive and thrive.

- A proposed federal tax on the annual increase in billionaires’ wealth would generate an estimated $557 billion over 10 years. Hawaii has one of the most lucrative tourism industries in the country, with more than 10 million visitors per year.

In Hawaii, state taxpayer dollars are being siphoned towards militarism: state taxpayer dollars for deportations and border control could instead subsidize more than 9,369 public housing units. Taxpayer dollars going to the biggest weapons contractor, Lockheed Martin, could hire more than 1,488 elementary school teachers.

More than $29.17 million from Hawaii taxpayers that is going to federal prisons could instead power more than 138,053 households with solar energy.

Hawaii spent $1.1 billion of the $1.6 billion it was allocated under the American Rescue Plan, which could be used for housing, health care and other pressing needs. If the state and local governments do not allocate these resources by December 2024, the remaining funds will be lost.

---

### Moving these resources, and investing more, to fully meet all of our needs will save lives and revive our national economy.

- During the pandemic, eviction moratoria and moratoria on utility disconnections saved lives. If enacted earlier, they could have reduced Covid deaths by 40% and 75%, respectively, across the nation. Universal health care could have saved 330,000 lives.

- Enacting Medicare for All will save $450 billion in health care costs and 68,000 lives every year.

- Ending mass incarceration could raise average US life expectancy by five years.

- Providing permanent safe housing delivers lifelong benefits to children and families at an average cost of $12,800 per person per year, far less than the cost of crisis services for those suffering chronic homelessness.

- Paid Family and Medical Leave improves employment, especially among women, increases child well-being and protects against poverty when health challenges arise.

- Increasing resources for the poor stimulates the economy much more than making the rich even richer, because the poor need to spend nearly everything they earn. Every dollar going to a low-wage worker adds $1.20 to the economy overall. Every dollar spent on food stamps generates $1.50-$1.80 in economic activity.

- Expanded unemployment insurance during the pandemic protected 5.1 million jobs by boosting economic activity.

- The expanded Child Tax Credit was estimated to have a greater impact on the economy than military spending, without negative impacts on employment.

- Overdue improvements to TANF could triple its reach and improve the lives of at least 2.38 million families nationwide.

- Every dollar invested in providing families clean water and proper sanitation yields 5 times as many returns to the US economy.

- Freedom from debt would allow more people to start small businesses and move around the country to take better jobs, strengthening our economy and workforce.
